

## EYELASH EXTENSION GLUE – PATCH TEST

The Adhesive used for eyelash extensions is a medical grade and is only to be applied to lashes, not the skin. It is very unlikely that clients will experience an allergic reaction, however it is recommended that a small amount of glue is applied to the clients lashes 24 hours before a full set of extensions are carried out.

Please complete the following to confirm that a patch test was carried out, and that no reaction occurred. If there is any sign of redness, itching, swelling or blistering, return to have any traces of adhesive removed and do not proceed with the treatment.

I accept full responsibility for any reaction which might occur.
